

# Certified Risk Management Professional

## TRAINING PROGRAM

Certified Risk Management Professional based on ISO 31000:2018, ISO/IEC 27001:2013 and ISO 22301:2019

## WHAT IS RISK MANAGEMENT?

Organizations of all types and sizes face external and internal factors and influences that make it uncertain whether they will achieve their objectives. These objectives may relate to various organizational activities, from strategic initiatives to its operations, processes, and projects. This may reflect in terms of societal, environmental, technological, safety and security outcomes, commercial, financial, and economic measures, as well as social, cultural, political and reputation impacts.

Managing risk considers the external and internal context of the organization, including human behavior and cultural factors. This risk management course is structured to provide the knowledge and skill required to assess and conduct a risk assessment for organizations with respect to the requirements of ISO 31000:2018, including the risk management aspects of ISO 27001 and ISO 22301.

This comprehensive three-day risk management training & certification course comprises case studies, training, and group discussions. This risk management professional training ensures that the participants thoroughly understand the principles, framework, and risk assessment process. The certification for risk management professionals helps the attendees conduct risk assessments and improve their organisation's efficiency.

## **DETAILS ABOUT RISK MANAGEMENT THROUGH ISO 31000, ISO 27001 AND ISO 22301**

- **Risk Management aspects according to ISO 31000:2018**

ISO 31000 puts forth a framework and a well-defined process for managing organizational risks regardless of size, activity or sector. Using ISO 31000 can help organizations increase the likelihood of achieving objectives, improve the identification of opportunities and threats and effectively allocate and use resources for risk treatment. This risk management course will help participants understand the basics of risk, risk identification, evaluation, treatment, review, monitoring and communication according to ISO 31000.

---

- **Risk Management aspects according to ISO 27001**

ISO 27001 specifies the requirements for establishing, implementing, maintaining and continually improving an information security management system within the context of the organization. It also includes requirements for the assessment and treatment of information security risks tailored to the needs of the organization. The risk management aspects of ISO 27001 are covered under this risk management course.

---

- **Risk Management aspects according to ISO 22301**

ISO 22301 helps you in ensuring business continuity, crisis management, and business impact assessments. It is a systematic approach to achieving its operation and continuous improvement. It trains the professional in identifying and assessing the risk and designing an appropriate business continuity plan in case of a crisis due to the risk.

This risk management training course covers the risk related aspects of ISO 22301 standard.
